

HunterAGILE

Complex Defence Trainer of Choice

CAPABILITY BROCHURE 2021

AGILE TRAINING AND MANAGEMENT SOLUTIONS

Established in Melbourne in 2017 by career veterans of the Defence domain, Hunter AGILE Pty Ltd is a 100% Australian owned and veteran operated 'Complex Defence training partner of choice'. We provide agile and holistic training solutions and training management services to Australian and international Defence and commercial sectors on programs valued up to \$28 billion.

Hunter AGILE specialises in Joint Fires, Joint and Land Domain weapons and systems, precision and conventional munitions for the application of combat power.

The Hunter AGILE Team

The Hunter AGILE Team is a nimble, professional and experienced team that is security cleared and brings decades of Australian Defence Force (ADF) and Defence industry experience in training design, training management and weapons training. Hunter AGILE also has DSS accreditation in tender acceptance of our staff accredited as Level 4 experts in all of Defence's training skills.

Hunter AGILE has built on extensive combined subject matter expertise and corporate knowledge to meet government and industry's current and emerging future training requirements, strategies and technologies. We are committed to developing Australia's Sovereign Capability and improving training solutions for the Australian Warfighter.

Hunter AGILE has a deep understanding of the Defence landscape and speaks the language of the Commonwealth of Australia (CoA) and the global Defence sector. We translate complex training requirements into actionable outcomes for operators, end users, commanders and procurement specialists.

The Hunter AGILE Team comprises subject matter experts in the Training and Joint Fires domain who understand how to apply combat power effectively. We understand the Joint domain and future training strategies and incorporate these when designing training solutions to remediate the extant workforce (Gap training/Introduction Into Service (IIS)/Raise Train Sustain training) as new weapons and support systems and ordnance/explosive ordnance are introduced. We also understand the ILS training integration within the Capability Life Cycle and are experienced working to ASDEFCON requirements on minor and major projects.

A Values-based Business

Hunter AGILE is a values-based business with a genuine and ethical approach to developing and enhancing Australia's Sovereign Capability. We achieve this by applying the highest standards and values required to deliver for government and industry partners successfully and repeatedly. Hunter AGILE has developed a strong reputation as the 'Complex Defence training partner of choice'.

Key Project & Program Support

The Hunter AGILE Team produces timely and cost-efficient results on complex government and industry requirements and has worked on some of Australia's largest Defence programs:

- We support Government and Defence agencies as well as Defence Industry partners acting for Defence to analyse, manage and develop training solutions for several major Land domain programs valued up to \$28 billion.
- We support the ongoing digitisation of the CoA's Joint Fires Weapon Planning and Authorisation System. We undertake training analysis, design, development, implementation and provide senior experienced and trusted Joint Fires subject matter expert support.
- We apply a Model Based Systems Engineering approach to align engineer defined safety thread gaps with doctrine. We are currently supporting Defence, a multi-national Prime Contractor and a leading complex weapons engineer partner.
- We provide MSP and CASG support on several major Land domain programs.
- We work with industry partners to integrate Artificial Intelligence into Joint domain training systems to reduce overall training costs. We also improve training requirements on complex or expensive qualification, currency or readiness certification.
- We undertook training evaluation analysis observation on the SEA 1442 ANZAC Class Frigate Upgrade and developed a Recommendations Report for the Surface domain major sub-system replacement on behalf of Strategic Partner, the CoA, CASG and the Navy.
- We developed a Training Requirements Study for the L171C2 Future Artillery Ammunition IIS, Army Precision Guided Munitions Remediation Project and provided recommendations to LEOSPO.

Complex Defence Training

- Training analysis, design, development, implementation and evaluation that comply with government and industry requirements.
- Systems Approach to Defence Learning translation and application for government and industry.
- Joint Fires training in Land, Sea, Air and Joint domain – from translation, design and development to delivery.
- Platform, weapon and munition systems training solutions at CoA certified levels.
- Developing core Defence training documents and policies.
- Training requirement design, development and implementation.
- Training system operation and management.
- Training analysis of market, equipment and needs.
- Training gap analyses of learning management packages using command and control procedures and developing recommendations.
- Developing existing and emerging brand advanced agnostic training technologies.
- Computer-based training, including interactive electronic training publications.
- Content development for simple solutions through to complex training problems.

Content Development

- E-learning packages.
- E-interactive user manuals.
- Training packages and how to guide videos.
- Defence documentation including technology control plans.

Supporting Services

- Establishing cyber security protocols and business practices for training systems and understanding the application and requirements of ITAR constraints.
- Training system procurement advice, including training risk assessment and management.
- Strategic planning and development of training change management.
- Simulation design, integration, operation and maintenance.
- Utilising VR, AR and VR/AR with AI interfaces across all simulation platforms.
- Functional and integrational analysis of platform and Joint Fires systems capabilities.
- Developing project management protocols using PMBOK or other project management system principles when required, including documentation and training solution design.
- Gap training course development and management.
- Train the Trainer and Train the Operator course development and management.
- ASDEFCON tender writing, editing and production for training solution submissions.
